

NetNumber Joins Intel® Network Builders Program to Help Accelerate Design and Deployment of NFV and SDN Solutions

LOWELL, Mass. — Oct. 7, 2014 — NetNumber announced today it has joined the Intel® Network Builders program. NetNumber is joining this cross-industry initiative to spark innovation, reduce development effort, advance open network standards, increase operability, and ultimately, reduce time to market for NFV and SDN solutions. Through the program, members have access to a comprehensive reference architecture library of proven solutions that facilitate the building and optimization of software-defined infrastructure for the network based on today’s operator requirements.

NetNumber provides a common infrastructure called TITAN for all signaling control, policy enforcement and subscriber database services in the network. TITAN drives complexity out of the NFV model by delivering a single platform that integrates directly into the NFV service-orchestration layer supporting multi-protocol signaling-control services, including SS7/C7, DNS/ENUM, SIP and Diameter. TITAN is transforming how operators deliver new high-definition voice and video services to their customers while drastically simplifying the network core and reducing operating costs through either COTS hardware or virtualized architecture deployment options.

“With the introduction of NFV solutions in the core of the network, simplification of the signaling-control layer has become increasingly important for operators,” said Steve Legge, vice president of Corporate Development, NetNumber. “The signaling and control layer deserves particular focus because of the large number of existing silo functions that need to be virtualized, and the critical role these functions play in the network. NetNumber is pleased to join the Intel Network Builders program, and share our expertise in signaling to help accelerate the design and deployment of virtualized solutions.”

Today, TITAN is deployed on more than 350 servers on five continents, and supports more than 200 billion transactions per month.

About NetNumber

NetNumber, Inc. brings 14 years of experience delivering innovative signaling control solutions that enable carriers to accelerate implementation of new services across multiple generations of networks, while dramatically simplifying the core network and reducing operating costs. Today, we are the leading provider of converged signaling, routing and database services to the global communications industry. Visit www.netnumber.com for more information. Connect with us on Twitter, LinkedIn, Google+ and Facebook.
