

## **NetNumber Joins ETSI Industry Group for NFV to Support Industry Innovation and Interoperability**

LOWELL, Mass. — Dec. 2, 2014 — NetNumber announced today it has been accepted as a member into the NFV Industry Group (ISG) in the European Telecommunications Standards Institute (ETSI). Since the NFV ISG founding in November 2012, leading telecom operators and vendors have been working together on standards and sharing development and implementation practices. NetNumber is joining this initiative to help define architecture specifications for the network infrastructure required to support virtualized functions.

The NetNumber TITAN platform provides multi-protocol centralized signaling and routing control (CSCR) services for a converged network. TITAN is a common, virtualized infrastructure for all signaling control, routing policy enforcement and subscriber database services in the network. TITAN is transforming how operators deliver new services to their customers while dramatically simplifying the network core and reducing operating costs with IMS, LTE and SS7 applications combined in TITAN and seamlessly integrated in the existing operator network and OSS/BSS.

“Telecom operators today are dealing with a myriad of challenges—rapidly changing technology, maximizing return on investment, and architecting the network for agility and flexibility in order to change user services and offer new services more quickly,” said Matt Rosenberg, vice president of Global Sales, Solution Design and Product Management, NetNumber. “To meet these challenges, operators are drastically rethinking their network architecture. Virtualization can help operators reduce deployment times and create new services. NetNumber is pleased to join the ETSI Industry Group for NFV, and share our expertise in signaling to help accelerate the design and deployment of virtualized solutions.”

Today, TITAN is deployed on more than 350 servers on five continents, and supports more than 200 billion transactions per month.

**About NetNumber**

NetNumber, Inc. brings 15 years of experience delivering innovative signaling control solutions that enable carriers to accelerate implementation of new services across multiple generations of networks, while dramatically simplifying the core network and reducing operating costs. Today, we are the leading provider of provider of Centralized Signaling and Routing Control (CSRC) solutions to the global communications industry.
