

NetNumber Named a “Cool Vendor” by Gartner

LOWELL, Mass. — April 28, 2015 — NetNumber announced today it has been named a Cool Vendor for Communications Service Provider (CSP) Infrastructure 2015 by Gartner. Cool Vendors are those that have caught Gartner's interest during the past year because they offer innovative or high-potential technologies or solutions. In the corresponding report, Gartner evaluates vendors whose products have an impact on CSP infrastructure and other emerging markets — such as cloud-based offerings — with newer software-defined network (SDN) control for elastic network services, network function virtualization (NFV) service orchestration and emerging mobile backhaul solutions.

“NetNumber is honored to be recognized by Gartner,” said Brad Boston, NetNumber CEO and president. “Our innovative software platform enables carriers to deploy next-generation services faster and with lower OPEX investment, while also easing the transition from legacy networks to IP. Carriers are taking notice that continuing to deploy more silos of network functions in the core infrastructure is no longer effective and actually decreases their service agility. We believe being named a ‘Cool Vendor’ for CSP Infrastructure by a world-class analyst firm like Gartner helps to validate our unique approach to the market.”

The NetNumber TITAN platform provides multi-protocol centralized signaling and routing control (CSRC) services for a converged network. TITAN is a common, virtualized infrastructure for all signaling control, routing policy enforcement and subscriber database services in the network. It uniquely delivers centralized provisioning and management combined with a powerful distributed, in-memory database replication method that enables all signal processing to happen at the optimal location in an operator's network. TITAN is transforming how operators deliver new services to their customers while significantly simplifying the network core and reducing operating costs.

Today, TITAN is deployed on more than 350 servers on five continents, and supports more than 200 billion transactions per month.
