

NetNumber Joins Women in Comms Initiative

LOWELL, Mass. — May 5, 2016 — NetNumber, a leading provider of centralized signaling and routing control (CSRC) solutions, announced today it has joined Women in Comms (WiC). This is a not-for-profit, independent initiative providing information, networking, mentorship, access to jobs and support for women in the next-generations communication industry.

“NetNumber believes strongly in the value of a diverse workforce,” explained Brad Boston, president and CEO, NetNumber. “We are proud to join other companies in the telecom industry to increase opportunities for women. The telecom industry is transforming many sectors of global economies – healthcare, education, financial. Initiatives such as WiC enable all of us to take focused steps to invest in and leverage the talent of a diverse population in order to contribute to this transformation.”

“Women in Comms is thrilled to have NetNumber joining us as a partner and in Austin for our big event,” said WiC director Sarah Thomas. “NetNumber shares our commitment to supporting women in the industry, and together with our 36 other members, I am confident we will have a real impact on the next-generation comms industry.”

NetNumber will be participating in WiC’s biggest event of the year at the Big Communications Event (BCE) on May 23, 2016 at the Austin Convention Center. NetNumber will be showcasing the TITAN platform during BCE later in the week.

TITAN provides a common, virtualized infrastructure for all signaling control, routing policy enforcement and subscriber database services in the network. Customers easily can add a wide range of applications to support the transition from legacy to next-generation networking in one platform. Customer-defined service logic enables carriers to define a user interface consistent across all the applications deployed in TITAN, thus reducing training time and costs, and minimizing impact to current OSS/BSS systems. TITAN is transforming how operators deliver new services to their customers while significantly simplifying the network core and reducing

operating costs. Today, TITAN is deployed on more than 350 servers on five continents, and supports more than 200 billion transactions per month.
