

## **NetNumber Expands Support in Europe and MENA Regions With New Regional Office**

LOWELL, Mass. — May 1, 2018 — NetNumber announced today it has opened a new office in Prague to serve operators across Europe and in the Middle East and North Africa (MENA) regions. This office complements the company’s Utrecht, Netherlands office which opened in 2016, and continues NetNumber’s expansion of sales and support efforts globally as operators move towards network evolution and transformation.

According to several industry analyst firms, the telecoms services market in MENA will grow at a CAGR of nearly 10% between 2017 and 2022 to reach USD72.1 billion. In Europe, operators expect significant growth in roaming traffic across the region due to changes in interconnect rates that went into effect last Fall, resulting in more traffic over a wide range of 2G/3G and 4G services. Large operators in both regions also are preparing for 5G trials. As operators focus on improving and optimizing network infrastructure for increased agility while enhancing customer experience through service innovations and improved quality, NetNumber is positioned to be a solution provider of choice with its TITAN Centralized Signaling and Routing Control (CSRC) platform. Recently, NetNumber TITAN was recognized as the Best Core Network Product at the 5G MENA conference.

“Operators across Europe and MENA are investing heavily in network infrastructure projects as the demand for mobile broadband services continue to increase,” explained Matt Rosenberg, senior vice president, NetNumber Global Sales. “In the Middle East in particular, there is a focus on connecting ‘the next billion people’ to the Internet. This is an exciting time to work with operators in Europe and MENA! Our new office in Prague enables us to support the growth plans of our customers and our partners across Europe and MENA with our award-winning TITAN platform as well as training, deployment and other enhanced services.”

NetNumber TITAN, the industry’s most robust CSRC platform, provides a common, virtualized infrastructure for all signaling control, routing policy enforcement and subscriber database services in the network. Customers easily can add a wide range of applications to support the

transition from legacy to next-generation networking in one platform. Customer-defined service logic enables carriers to define a user interface consistent across all the applications deployed in TITAN, thus reducing training time and costs, and minimizing impact to current OSS/BSS systems. TITAN is transforming how operators deliver new services to their customers while significantly simplifying the network core and reducing operating costs.

The NetNumber TITAN CSRC platform is deployed by more than 170 operators and carriers, on more than 450 servers across five continents. Its robust subscriber data management capability supports more than 200 billion transactions per month.
