

## **NetNumber Expands Number Portability Coverage**

### ***Company Expands Resources to Drive Business Growth***

LOWELL, Mass. — May 8, 2018 — NetNumber announced it has added another dozen countries to its Global Number Portability (NP) solution, offered as part of NetNumber’s Global Data Services (GDS). GDS is a cloud-service that utilizes the NetNumber TITAN platform to deliver multiple data services to telco operators and enterprises around the globe. NetNumber now offers NP data via data bases or referral query services for 90 countries. GDS customers include telecom operators, enterprises and financial institutions that need access to network owner information for mobile and landline numbers to deliver services.

The Global NP service provides the basis for essential global inter-carrier routing for roaming, voice and messaging. The service enables accurate and efficient routing of voice and messaging services while decreasing the cost. As the second largest telecom registry globally, it handles more than four billion transactions monthly.

NetNumber recently hired industry expert John Coleman to lead sales and customer expansion in the United States. With more than 20 years of experience in the telecom information services sector, Mr. Coleman has a history of successful executive sales, business development, and account management roles at both startups and larger enterprise organizations providing services to the telecom space. He joins NetNumber from his most recent role as Director of Sales for the Business Services Division of First Orion, formerly Accudata Technologies.

“New voice and messaging capabilities as well as two-type security authentication requirements are driving telecom operators and enterprises to expand their needs for accurate, authoritative communications network data and services,” explained Steve Legge, general manager of NetNumber GDS. “In response, NetNumber continues to expand its authoritative global data to meet new requirements and offload the burden from operators and enterprises trying to source the data from many global locations and normalize it themselves. We’re excited to have John on board to help uncover new opportunities and work with our team to develop new data services.”
