

## **NetNumber Integrates Global Data Services and AWS Cloud**

### ***More Flexible Options for Accessing Data Services Globally***

LOWELL, Mass. — July 24, 2018 — NetNumber announced it has integrated its Global Data Services (GDS) platform with Amazon Web Services (AWS) allowing flexible global access to its broad portfolio of data solutions. GDS is a cloud-service that utilizes the NetNumber TITAN platform to deliver multiple data services to telco operators and enterprises around the globe. Hundreds of customers including Tier-1 carriers/operators access GDS today, leveraging multiple solutions including Override Services Registry (OSR), Carrier-ID, Number Portability with global coverage, Port-History, Number Information Services, CNAM, and Toll-Free Routing.

Availability of data services via AWS infrastructure provides a flexible, cost effective way to access the GDS portfolio with a high availability, low latency solution. Customers now can access GDS in their AWS region and availability-zones of choice, via IPSec-VPN connection or VPC-peering services. This new AWS-Hybrid service can be turned up virtually on-demand, and scale to support any volume of signaling activity via horizontal scaling of TITAN virtual instances.

“For operators and enterprises alike, migrating legacy IT systems to a virtual environment can require an enormous investment in time and money,” explained Steve Legge, general manager of NetNumber GDS. “Hybrid architectures such as those enabled by AWS provide a step along the journey to cloud adoption, without the need for investments in new hardware. NetNumber is committed to providing our customers with the most robust and flexible virtual infrastructure. The integration of our global data services with AWS further simplifies access to data services required by our customers.”
