

NetNumber helps customers to get maximum value from TITAN platform

New open-source management system to increase efficiency and add greater control

LOWELL, Mass. — Feb. 19, 2019 (GLOBE NEWSWIRE) — NetNumber announced today it has released a new generation of management system aimed at helping its customers get the maximum performance and value from its TITANTM platform. The NetNumber EMS goes beyond the existing proprietary user interface, to deliver device management and service assurance across the protocols and applications supported by NetNumber TITAN. It is a flexible, easy-to-deploy solution based on ZabbixTM, with a visually appealing user interface and a common inventory and data model.

“NetNumber has worked closely with our existing customers, including major service providers, to understand the features required to serve them better with TITAN’s broad signaling, routing and security functionality,” explained Steve Legge, Chief Operating Officer for NetNumber.

NetNumber EMS has already been selected by a major European service provider customer, and a number of other TITAN customers have it under evaluation. Its key features include auto-discovery and change management, problem management, monitoring and performance reporting. The EMS takes full advantage of the Zabbix open interfaces and template-driven simplification to accelerate its deployment.

“Working with the Zabbix framework, our new NetNumber EMS takes advantage of extensive and industry proven interfacing, monitoring and processing capabilities.” Steve Legge added, “Our customers will appreciate this next level of tooling, as they transform, modernize and catapult their networks towards a 5G future.”

Zabbix are based in the United States, Europe and Japan. Their focus is the development of open source software for monitoring of networks and applications. The company's flagship product is Zabbix, one of the most popular open source monitoring software in the world. It is already used by a vast number of companies, who have chosen it due to real scalability, high and robust

performance, ease of use and extremely low costs of ownership.

Alexei Vladishev, Founder and CEO of Zabbix SIA commented “We are super excited to see such a big initiative based on a true open source product.”
